

When the Flag Is Clicked

An event is what starts a script

Name:

Date:

★ I can read the event block that tells a script when to start.

A script waits for its event

A script does not run on its own — it waits for an EVENT. Clicking the green flag is an event. The orange hat block 'when green flag clicked' sits on top of a script and starts it when the flag is clicked. Bit's home is 0. Watch what the event makes Bit do.

The number path

Bit

Bit's script

when green flag clicked

forward 3

1 Click the flag

The green flag is clicked, so the event happens and Bit's script runs. From home 0, forward 3. What number does Bit land on?

2 No event yet

Before anyone clicks the flag, the event has NOT happened. Does Bit's script run yet? Circle YES or NO. What number is Bit on?

3 What is the event?

Look at the orange hat block. What EVENT starts Bit's script? Write it.

Big idea

The orange hat block names the EVENT that starts a script. 'When green flag clicked' means: wait until the flag is clicked, then run. No event yet means the script has not run — Bit stays at home.
