

What Comes First?

Finding the step that starts it all

Name: _____

Date: _____

★ I can find the step that must happen first.

Some steps must come first

You cannot slide down before you climb up! Some steps have to happen FIRST. Help Bit find the step that comes first.

Watch Bit go down the slide

climb up

slide down

First climb up ↑, then slide down ↓. Up comes first.

1 Climb the ladder

To get to the top, what comes first? Circle it. ↑ climb up ↓ come down

2 Go through the door

Bit wants to go through the door. What comes first? Circle it. (a) open the door (b) walk through ➡

3 You try — get ready

Which comes first when you get dressed? Circle it. 1) put on a sock 2) put on a shoe

Big idea

Finding the first step is how you start a plan. If you do steps out of order, the plan does not work.

What Comes First?

Quick facilitation notes & answer key

What this worksheet teaches

Children pick the step that must happen FIRST in a two-step action (like climbing up before sliding down). Knowing which step comes first — and that some steps depend on an earlier one — is key to a correct plan. No coding experience needed.

Before you start (no computer needed)

No computer — paper and a pencil or crayon. You read each prompt aloud; the child answers by circling or numbering. Optional: real objects or cards to put in order by hand first.

How to lead it (about 15 minutes)

1. Show them (you do). A slide: first you climb up, then you slide down. You cannot slide before you climb.
2. Do one together. Exercise 1 — climb up comes first.
3. Let them try. Children do Exercise 2 (open the door first), then Exercise 3 (sock before shoe).

Answer key (these are the verified correct answers)

Exercise 1 — circle "climb up". Exercise 2 — circle "open the door".

Exercise 3 — circle "put on a sock" (the sock goes on before the shoe).

If children get stuck — and ways to adjust

Watch for: picking the step they like best instead of the one that must come first. Ask "could you do the other one first?"

Make it easier: act the two steps out and try them in the wrong order — it does not work.

Make it harder: ask for a three-step routine and which step is first (e.g. wet hands, soap, rinse).

Make it active: have children mime the action in the correct order.

Ontario Kindergarten link (official wording)

Problem Solving and Innovating — children reason about the order in which steps must occur.

In plain terms: noticing which step has to happen first.

No reading is needed from the child — you read each prompt aloud; the child answers by circling, numbering, or drawing arrows.

You'll know it worked when

The child circles the step that must happen first in each pair and can say why.
