

Run It Top to Bottom

Blocks run in order, from the top down

Name:

Date:

★ I can tell the order the blocks in a stack run.

Top to bottom

Bit runs a stack from the TOP block down. The top block runs first. Then the next block. Then the next — one block at a time, all the way to the bottom.

Bit's stack

Bit runs the top  block first, then works down: , then , then  at the bottom.

1 Runs first

Circle the block Bit runs FIRST. Remember: Bit always starts at the top.

2 Number the order

Bit runs the stack from top to bottom. Write 1, 2, 3, 4 on the blocks above to show the order Bit runs them. The top  block is 1.

Another stack

3 You try

Look at the new stack. Circle the block Bit runs LAST (the bottom one). Then write 1, 2, 3 on the blocks to show the run order.

Big idea

A program runs in order, from the top down, one block at a time. The order of the blocks is the algorithm — change the order and Bit does something different.
