

# Which One Does Not Belong?

Finding the odd one out

Name: \_\_\_\_\_

Date: \_\_\_\_\_

★ I can find the one that does not belong with the others.

## One does not belong

Most of these are the same. One is different. Help Bit find the one that does NOT belong, and circle it.

### Watch Bit — three circles and one triangle

Three are circles. The triangle ▲ does not belong — it is the odd one out.

### 1 Circle the odd one out

Three are the same. Circle the one that does not belong.

### 2 Circle the odd one out

Three are the same. Circle the one that does not belong.

### 3 You try

Find the one that does not belong and circle it.

## **Big idea**

To find the odd one out, you decide what matters — here it is the shape. Choosing what matters is called abstraction, and computers do it to spot things that are different.

# Which One Does Not Belong?

Quick facilitation notes & answer key

## What this worksheet teaches

Children find the one shape in a group that does not match the others. Deciding what matters and ignoring the rest is a first thinking-skill behind coding — it is how computers spot what is different. No coding experience needed.

## Before you start (no computer needed)

No computer — paper and a pencil or crayon. You read each prompt aloud; the child circles the odd one out. Optional: a tray of objects where one does not belong, to find by hand first.

## How to lead it (about 15 minutes)

1. Show them (you do). Point to circle, circle, circle, triangle: "three are circles — which one is different?" Circle the triangle.
2. Do one together. Exercise 1 — three stars and one circle; circle the circle.
3. Let them try. Children do Exercise 2, then Exercise 3 on their own.

## Answer key (these are the verified correct answers)

Exercise 1 — star, star, circle, star → circle the circle. Exercise 2 — square, triangle, square, square → circle the triangle.

Exercise 3 — circle, circle, star, circle, circle → circle the star.

## If children get stuck — and ways to adjust

Watch for: circling a shape just because it is at the end. Ask "how is it different?"

Make it easier: start with two same + one different before four-card groups.

Make it harder: ask the child to say WHY it does not belong (it is a triangle, the rest are circles).

Make it active: stand in a small group where one child holds a different card — who does not belong?

## Ontario Kindergarten link (official wording)

Problem Solving and Innovating — children classify objects and notice which one does not belong.

In plain terms: noticing the one thing that does not fit the group.

No reading is needed from the child — you read each prompt aloud; the child answers by drawing or circling.

## You'll know it worked when

The child circles the single odd shape in each group and can say what makes the others the same.
