

Run It Top to Bottom

Blocks run in order, from the top down

Name:

Date:

★ I can tell the order the blocks in a stack run.

Top to bottom

Bit runs a stack from the TOP block down. The top block runs first. Then the next block. Then the next — one block at a time, all the way to the bottom.

Bit's stack

Bit runs the top  block first, then works down: , then , then  at the bottom.

1 Runs first

Circle the block Bit runs FIRST. Remember: Bit always starts at the top.

2 Number the order

Bit runs the stack from top to bottom. Write 1, 2, 3, 4 on the blocks above to show the order Bit runs them. The top  block is 1.

Another stack

3 You try

Look at the new stack. Circle the block Bit runs LAST (the bottom one). Then write 1, 2, 3 on the blocks to show the run order.

Big idea

A program runs in order, from the top down, one block at a time. The order of the blocks is the algorithm — change the order and Bit does something different.

Run It Top to Bottom

Quick facilitation notes & answer key

What this worksheet teaches

Children learn that a block program runs from the top block down, one block at a time, and that where a block sits decides when it runs. The order of the blocks IS the plan. No coding experience needed.

Before you start (no computer needed)

No computer — paper, a pencil, and a crayon. You read each prompt aloud. Optional: paper blocks (a green flag block + arrow blocks) to stack by hand, or floor boxes the child can walk.

How to lead it (about 15 minutes)

1. Show them (you do). Point to each block top to bottom and count: "first, next, next, last."
2. Do one together. Exercise 1 — Bit runs the top GO block first.
3. Let them try. Children number the run order (Ex 2), then mark the last block and number the order (Ex 3).

Answer key (these are the verified correct answers)

Exercise 1 — Bit runs the top GO block first. Exercise 2 — order down the stack: GO = 1, right = 2, up = 3, left = 4.

Exercise 3 — the last block is the bottom right arrow; order down the second stack: GO = 1, left = 2, right = 3.

If children get stuck — and ways to adjust

Watch for: numbering blocks bottom-up. The top block is always 1.

Make it easier: point to each block in order while the child writes the number.

Make it harder: ask which block runs third in a longer stack.

Make it active: children stand in a stack and sit down one at a time, top first.

Ontario Kindergarten link (official wording)

Problem Solving and Innovating — children determine and describe the order in which a set of instructions is carried out.

In plain terms: the blocks run from the top down, one at a time — the order is the plan.

No reading is needed from the child — you read each prompt aloud; the child circles, numbers, or draws an arrow.

You'll know it worked when

The child numbers the blocks top to bottom and names the first and last block.
