

Put It in Order

Four steps in the right order

Name: _____

Date: _____

★ I can put four steps in order from first to last.

Bit's plant grows step by step

Bit's plant grows a new leaf each day: 1 leaf, then 2, then 3, then 4. The steps go in order from fewest to most.

In order — 1, 2, 3, 4 leaves

day 1

day 2

day 3

day 4

Now these are mixed up

?

?

?

?

1 Write the order

Write 1, 2, 3, 4 under the mixed-up steps to put them in order (fewest leaves to most).

2 Which is first? Which is last?

Circle the step that is FIRST (1 leaf). Put an X on the step that is LAST (4 leaves).

3 You try — draw the next step

After 4 leaves comes day 5. Draw the next step (5 leaves).

Big idea

Putting several steps in the right order makes a plan. A plan of ordered steps is an algorithm — and computers follow them step by step.

Put It in Order

Quick facilitation notes & answer key

What this worksheet teaches

Children put four steps in order from fewest leaves to most, and add the next step. Arranging several steps in order is the heart of a plan a computer can follow one step at a time. No coding experience needed.

Before you start (no computer needed)

No computer — paper and a pencil or crayon. You read each prompt aloud; the child answers by circling or numbering. Optional: real objects or cards to put in order by hand first.

How to lead it (about 15 minutes)

1. Show them (you do). Line up cards with 1, 2, 3, 4 leaves in order — each day grows one more leaf.
2. Do one together. Exercise 1 — number the mixed-up cards in order from fewest to most.
3. Let them try. Children mark first and last (Ex 2), then draw the next step — 5 leaves (Ex 3).

Answer key (these are the verified correct answers)

Exercise 1 — the four cards show 4, 2, 1, and 3 leaves. Under each card, write its order from fewest to most: the 1-leaf card is 1, the 4-leaf card is 4.

Exercise 2 — circle the 1-leaf card (first); put an X on the 4-leaf card (last). Exercise 3 — draw a step with 5 leaves.

If children get stuck — and ways to adjust

Watch for: numbering left-to-right by position. Count the leaves on each card first.

Make it easier: order just three cards before doing four.

Make it harder: ask what day 6 would look like (6 leaves).

Make it active: have four children hold leaf cards and order themselves fewest to most.

Ontario Kindergarten link (official wording)

Problem Solving and Innovating — children order a multi-step process.

In plain terms: arranging several steps into the right order — the start of a plan (an algorithm).

No reading is needed from the child — you read each prompt aloud; the child answers by circling, numbering, or drawing arrows.

You'll know it worked when

The child orders the four steps fewest to most and draws a correct fifth step.
