

Read Bit's Stack

Run the blocks to find where Bit lands

Name:

Date:

★ I can run a short stack and find where Bit lands.

Run the stack

Bit starts on box 1. Run the blocks from the TOP down, one at a time. Each ➡ block moves Bit one box to the right. Each ⬅ block moves Bit one box to the left. The star is on box 4.

Bit's stage

Stack 1

1 Where does Bit land?

Run Stack 1 from box 1, one block at a time. Which box does Bit land on? Write the number.

Stack 2

2 Land on the star

Run Stack 2 from box 1. Which box does Bit land on? Is it the star? Write the number.

Stack 3

3 You try — watch the last block

Run Stack 3 from box 1. The last block is ←, so the last step goes back one box. Which box does Bit land on? Write the number.

Big idea

To know what a program does, you run it — one block at a time, in order. The same blocks in a different order land Bit on a different box.

Read Bit's Stack

Quick facilitation notes & answer key

What this worksheet teaches

Children run a short stack of blocks on a row of boxes and report where Bit lands. Running each block in order, one at a time, is running a program; the number and direction of blocks decide where Bit ends up. No coding experience needed.

Before you start (no computer needed)

No computer — paper, a pencil, and a crayon. You read each prompt aloud. Optional: paper blocks (a green flag block + arrow blocks) to stack by hand, or floor boxes the child can walk.

How to lead it (about 15 minutes)

1. Show them (you do). Start on box 1; run each block top to bottom, moving one box per arrow.
2. Do one together. Exercise 1 — Stack 1 (right, right) from box 1 lands on box 3.
3. Let them try. Children run Stack 2 (Ex 2) and Stack 3, where the last block goes back one (Ex 3).

Answer key (these are the verified correct answers)

Exercise 1 — Stack 1 (right, right) from box 1 → box 3. Exercise 2 — Stack 2 (right, right, right) → box 4, yes, the star.

Exercise 3 — Stack 3 (right, right, left) → box 3, then back to box 2. Bit lands on box 2.

If children get stuck — and ways to adjust

Watch for: counting the start box as a step. The first arrow leaves box 1.

Make it easier: walk each stack on floor boxes, one step per block.

Make it harder: ask which stack lands Bit on box 5.

Make it active: a child is Bit and steps one box per block the class reads.

Ontario Kindergarten link (official wording)

Problem Solving and Innovating — children carry out a sequence of coded instructions and determine the outcome.

In plain terms: running a stack of blocks in order to see where Bit lands.

No reading is needed from the child — you read each prompt aloud; the child circles, numbers, or draws an arrow.

You'll know it worked when

The child runs each stack in order and writes the correct landing box.
