

Does the Order Work?

Read the algorithm and check the order

Name: _____

Date: _____

★ I can tell if an algorithm's steps are in an order that works.

Check the order

Read each algorithm. Does the order make sense? Circle YES if it works, or NO if a step is in the wrong place. Then tell why. A step that needs another step must come AFTER it.

Algorithm A — draw a sun

1. draw a circle

2. add rays around it

3. colour it yellow

1 Does A work?

Circle YES or NO. Tell why the order does or does not work.

Algorithm B — have cereal

1. eat it

2. pour the milk

3. pour the cereal in the bowl

2 Does B work?

Circle YES or NO. Tell what is wrong with the order.

Algorithm C — go down the slide

1. climb the ladder

2. slide down

3. sit at the top

3 You try — C does not work

Circle YES or NO. Then write the 3 steps of C in an order that DOES work.

Big idea

An algorithm only works if every step comes after the steps it needs. If a step is in the wrong place, the order does not work — even if all the steps are there.
