

Move Blocks

Each block points the way Bit goes

Name:

Date:

★ I can match a move block to the way it makes Bit go.

One block, one way

A move block tells Bit ONE way to go. ➡ moves Bit RIGHT. ⬅ moves Bit LEFT. ⬆ moves Bit UP. ⬇ moves Bit DOWN. One block makes one step in one direction.

The move blocks

Four move blocks. Each arrow points the way Bit will travel.

1 Find UP

Circle the move block that makes Bit go UP.

2 Find LEFT

Circle the move block that makes Bit go to the LEFT.

An empty block

This block has no arrow yet.

3 You try

Bit wants to go DOWN. Draw the arrow in the empty block that tells Bit to go DOWN.
It points ↓.

Big idea

Each move block points the way Bit goes. To make Bit move a certain way, you pick the block with that arrow. That is how you tell a computer exactly what to do.

Move Blocks

Quick facilitation notes & answer key

What this worksheet teaches

Children learn the move blocks: each arrow block makes Bit travel in exactly one direction — right, left, up, or down. Matching a symbol to one exact action is the start of reading code. No coding experience needed.

Before you start (no computer needed)

No computer — paper, a pencil, and a crayon. You read each prompt aloud. Optional: paper blocks (a green flag block + arrow blocks) to stack by hand, or floor boxes the child can walk.

How to lead it (about 15 minutes)

1. Show them (you do). Hold up each arrow block and act it out: up arrow → step up, left arrow → step left.
2. Do one together. Exercise 1 — the up block makes Bit go up.
3. Let them try. Children find the left block (Ex 2), then draw a down arrow (Ex 3).

Answer key (these are the verified correct answers)

Exercise 1 — the up block (arrow points up). Exercise 2 — the left block (arrow points left).

Exercise 3 — the down block: the child draws an arrow pointing straight down in the empty block.

If children get stuck — and ways to adjust

Watch for: mixing up left and right. Step it out with the child to check.

Make it easier: use four arrow cards and walk each direction on the floor.

Make it harder: call a direction and have the child draw the matching arrow.

Make it active: play "arrow says" — children step the direction of each arrow you hold up.

Ontario Kindergarten link (official wording)

Problem Solving and Innovating — children use directional language and symbols to describe movement.

In plain terms: each arrow block moves Bit one way (right, left, up, or down).

No reading is needed from the child — you read each prompt aloud; the child circles, numbers, or draws an arrow.

You'll know it worked when

The child matches each arrow block to its direction and draws the down arrow correctly.
